pageTracker._trackPageview();
```

Stratego International has been engaged by the Manitoba Agri-Health Research Network (MAHRN) to help develop an assessment and growth strategy for the province's agri-health cluster.

By utilizing Stratego's SectorStim methodology and global industry experience, MAHRN is looking to develop an actionable strategy to position Manitoba as a nationally and internationally recognized centre of research, production, marketing, development and commercialization of agricultural products for health.
